

PRESS RELEASE | APRIL 2024

ECODIGITAL PROJECT PARTNERS PAVE THE WAY FOR DIGITAL EDUCATION IN SCHOOLS

In a fruitful meeting held from April 3rd to April 4th in Thessaloniki, Greece, EcoDigital partner organizations from Iceland, Cyprus, the Netherlands, and Romania came together to propel forward the integration of environmentally-conscious digital education in classrooms. The first day of the gathering saw partners carefully reviewing the project's dissemination plan, quality assurance plan, management details, and most importantly, the implementation plan for the EcoDigital curriculum. This curriculum, soon to enter the piloting phase in partner schools, aims to equip students with the knowledge and skills needed to navigate the digital world responsibly while fostering a deep appreciation for environmental sustainability.

Research conducted by the EcoDigital team highlights the central role of educators in promoting environmental awareness and instilling sustainable digital habits in students. By embracing the methodologies outlined in the EcoDigital curriculum, schools have the opportunity to shape students into critical thinkers, conscientious digital consumers, and advocates for eco-friendly practices.

The second day of the gathering took the project partners to the innovative Big Bang School, renowned for its holistic approach to education. As a School of Nature, Big Bang School offers enriched interdisciplinary learning experiences, providing an ideal setting for exploring the nature and digital literacy.

With its emphasis on interactive role-play sessions, the workshop provided partners with a platform to delve into scenarios addressing pressing environmental challenges. These immersive exercises not only fostered collaboration but also empowered participants to brainstorm innovative solutions to real-world issues.

The EcoDigital project promises to revolutionize education by integrating sustainability and digital literacy into the classroom experience.
